

Quality Assurance Engineer

Job Description

Betologic is looking for a QA Engineer that will develop, maintain, and execute test plans and test cases. The QA Engineer will develop and maintain test automation scripts and tools and will ensure comprehensive test coverage by working closely with the product team to prioritize testing execution and report on test execution progress and results. In addition the successful candidate will participate in design and specification reviews, and will use this information to design test plans and test automation. He/She will promote QA productivity through automation, tools, and other best practices and will be expected to promote a culture of quality throughout the organization.

BASIC QUALIFICATIONS

- BA/BSc in Computer Science or equivalent experience.
- 2+ years in Quality Assurance or Quality Engineering Working knowledge of black box and white box testing, and a strong understanding of and experience with SQA methodologies, techniques and approaches.
- Excellent problem solving and analytical skills.
- Exposure to testing client/server software.
- Strong desire to deliver an excellent customer experience.
- Ability to manage small projects: organized, independent, and results-oriented.
- Relentless attention to detail – meticulous to a fault!
- Demonstrated competence documenting product information and communicating it to others.
- Ability to work with technical and non-technical business owners.
